Bladder Ultrasound, Bladder Ultrasound

715

Uronepsis

Chronic Salpingitis

Bladder Ultrasound (CPT 76857)

Indication: Residual urine determination

Findings

1 Residual urine = 20 cc

2 No other abnormalities noted

Procedure

Prior to ultrasound evaluation, the patient was asked to void to completion. Longitudinal and transverse images of the bladder were obtained. Volume determination was made according to the equation

$V = 0.536 \times D1 \times D2 \times D3 \times 0.001$

D1 (transverse width) = 7 cm

D2 (transverse depth) = 6 cm

D3 (longitudinal width) = 1.3 cm

Bladder wall thickness was normal

No other abnormalities were noted

Diagnosis: Sepsis

METROPOLITAN INTERCOMMUNITY HOSPITAL
2241 East Jefferson - Atlanta, GA 90602 - (404) 698-0811

Patient Harper, Gregory Age 36 Sex M Dec 07, 2001 14:47
Case # J01-1070 Medical Record # 3597888

***** SURGPATH GROSS & MICRO *****

Specimen(s) Kidney
A Kidney 639

CLINICAL DIAGNOSIS Left Renal Tumor

TISSUE

GROSS DESCRIPTION
Received labeled " " and consists of a 4.6x4.4x1.7x1.4x0.8 cm radical nephrectomy specimen with a 1.0 cm in length segment of left ureter still attached to the specimen. The ureter is of even caliber with no gross evidence of involvement by tumor. The perinephric fat shows no gross evidence of tumor on its external surface. Also included with the specimen is the left adrenal gland which is 4.0 cm and on sectioning shows a crisp cortical medullary demarcation with no gross evidence of involvement by tumor. The kidney is bivalved longitudinally through the equatorial portion and confirms a 4.0 cm intraparenchymal tumor nodule composed of well circumscribed bright yellow and extensively hemorrhagic tissue arising somewhat in the lower pole near the equatorial portion of the kidney and has a pushing margin up into the perinephric fat. The tumor does not extend grossly to the edge of the perinephric fat. The vascular resection margins as well as the ureteral resection margin shows no gross evidence of involvement by tumor. The kidney itself measures 10.0 cm. Representative sections from the vascular and left ureteral resection margins in block A with the left adrenal sampled in block B. The tumor is sampled in blocks C, D, E, F, and G. No perihilar lymph nodes are grossly identified. There are certain structures with at least suggestive lymph node and these are
